

Robin Hill is a clinical research physicist at the Chris O'Brien Lifecare Centre, Sydney, Australia. An interest in kilovoltage x-ray beam dosimetry that started during his honours led to the completion of PhD from the University of Sydney. Robin is passionate about education in medical physics as evident in his involvement in teaching at the University of Sydney including supervision of many students as part of their research projects. He is also involved in a number of radiation oncology projects within the IAEA supporting medical physics in South East Asia through on-site visits, PhD supervision and regional collaborations. When he is not working, Robin enjoys bike riding, travelling with his family and finding good coffee shops.
